

Choose one reading lead.

Open Crop-Source-Atlas.html after extracting the ZIP, or open Crop-Source-Atlas.csv in a spreadsheet. Search the crop, author or topic that brought you here.

Your first ten minutes

Choose one entry. Read its measured topic, summary, limitation and review depth together. Follow its original source link while online. Record whether you checked metadata, an abstract or the full text.

Preserve the scope

A harvested-fruit storage paper and a growing-plant yield paper ask different questions. Do not rank the directory by a single crop-benefit percentage or infer a treatment from a reading lead.

What the directory contains

Twenty-one source entries, original paraphrases, publication citations, source URLs, limitations and recorded review depth. The CSV and HTML contain the same retained reference records. No additional numerical model or live literature update is implied.

The same 21 underlying reference records are included in the kit. This standalone adds its own searchable offline reader and short guide.
