

One record you can explain.

Open Evidence-Notebook.html in a current desktop browser after extracting this ZIP. Choose Garden observations or Study notes. A real observation and a traced study claim are separate record types.

Your first 15 minutes

Minutes 1-3: name one plant measurement or one published claim. Minutes 4-8: record the value, unit and method, or the exact source result location. Minutes 9-12: add the context and one limitation. Minutes 13-15: export JSON and locate the downloaded backup.

One clear observation

Give the date, plant label, crop, measurement, value, unit and method. Zero is a measured value. Do not invent a reading if a measurement is missing.

One traceable source note

Record the question, citation or DOI, biological model, endpoint, source location and observed result. Mark the review depth honestly. Write your interpretation separately from what the paper reports.

This asset is included in the \$8.88 Jasmonate Garden Evidence Kit. If you own that kit, you do not need this standalone purchase.
