

Choose a useful blank template.

Garden observation

Use one row per measurement event. Keep date, plant label, crop, setting, measurement, value, unit and method together. Blank means not measured; zero means measured zero.

Weekly review

Identify which rows can be compared or summed and why. Keep the unit and scope attached. Name missing readings, other changes, uncertainty and your next question.

Study extraction

Trace one published claim. Record the model, compound and comparator, endpoint, tissue, unit, sample, exact source location, reported result and statistical statement. Keep limitations beside the interpretation.

Decision log

Write the question, available observation or source, supported result, unknowns, competing explanations, next verification and decision with its reason.

This asset is included in the \$8.88 Jasmonate Garden Evidence Kit. If you own that kit, you do not need this standalone purchase.
